Web Developer, salary dependant on experience

Corporation Pop is a design company. We design original, intelligent and engaging tools that help our clients communicate with their audience. We do this by gaining a deep understanding of our client's needs and those of their customers.

Passionate about the work we produce and the people we produce it for, we believe in the power of design to change lives, influence people and make things better. We work hard to push boundaries, challenge convention and deliver solutions that are successful for our clients. It is for these reasons that forward-thinking companies like Channel 4, EMI, the BBC and Live Nation choose to work with us delivering exciting and often ground-breaking projects across a range of media and devices – from websites and facebook apps to virtual environments and solutions for new TV platforms.

We're now looking for a talented developer to join our growing team. We're open to applications from anyone with at least two year's work experience post-degree – if you've got three or more even better!

It is essential that you can tick all of the following:

- have experience of JavaScript and libraries such as jQuery
- have experience in at least one object oriented programming language such as PHP
- have experience of version control systems such as Mercurial, Git or SVN
- have experience building responsive websites with semantically correct HTML and CSS
- can demonstrate a meticulous approach to your work with a keen eye for detail
- have an appreciation of good design
- have bags of initiative and are an enthusiastic self-starter
- relish the opportunities and surprises that a diverse workload will throw at you

It would be great if you can tick a few of the following:

- have experience of HTML5 using canvas and/or WebGL
- have experience managing linux servers
- are familiar with Agile Methodologies (eg DSDM Atern, SCRUM)
- have experience of specifying and managing high traffic websites using CDNs and caching
- have experience writing technical documentation
- have experience of database architecture and optimisation
- have an understanding of web standards (accessibility, usability, coding practices)

It would be a bonus if you can tick one or more of the following:

- have experience developing multiplayer gaming applications
- have experience of development in either Java or C#
- have experience with Unity3D development
- are familiar with CWE and web security issues
- have an understanding of SEO

In return we will provide:

- a great working environment with roof terrace for sunny lunches and evening beers!
- a friendly, supportive and highly experienced team
- opportunities to get involved in creative brain-storming and idea origination
- Ride to Work scheme
- bonus scheme
- training
- as much tea and coffee as you can drink

Please send your CV (with links to recent projects) and covering letter explaining why you're right for this job (and include salary expectations) to jobs@corporationpop.co.uk. We are keen to appoint to this position as soon as possible and will close applications as soon as we see a CV that excites us. We are currently only accepting direct application and will not be instructing recruitment agents.
