

Corporation Pop

21–23 Shudehill

Manchester

M4 2AF

QA Tester. £28-32k depending on experience

Corporation Pop is an award-winning digital innovation agency. We deliver strategic, thoughtful and innovative design and technology solutions that respond to user needs. We are well known for our work in immersive technologies and earlier this year we were listed by Clutch, the international and impartial review site, as one of the top 15 mobile app development companies in the UK. In everything we do we aim for innovation and originality. In everything we deliver we promise reliability and effectiveness. We value creativity and encourage experimentation.

It is for these reasons that companies like Future PLC, Channel 4, the BBC, Cyber Security Challenge, the NHS and Live Nation choose to work with us to deliver exciting and often ground-breaking projects across a range of media and devices.

The role:

We are now looking for an experienced QA Tester to join our rapidly growing team. This is an exciting opportunity to work as part of a highly experienced team across all our projects, ranging from Android and iOS apps, to heavy load websites and multi-player gaming environments. We want our next hire to be somebody who can build on and improve our QA processes to strengthen the service we offer our clients. The ideal candidate will have had at least 2 years of commercial experience and a relevant degree in Computer Science, Information Technology or similar.

Responsibilities include:

- Develop, execute and maintain test plans and cases
- Design acceptance tests for both functional and non functional specifications/acceptance criteria
- Work closely with the UX design team and development team
- Work collaboratively with the project management team from user stories through to deployment
- Raise potential technical issues with the appropriate development team member
- Testing across a range of desktop and mobile devices, and operating systems
- Log and track defects on the company's issue tracking system (JIRA)
- Create and manage documentation on test results for each project

We would love to talk to you if you:

- Understand current thinking in testing and QA
- Have experience with, and a desire to work using, agile practices
- Have experience converting acceptance criteria into workable tests
- Have the ability to refine requirements and define acceptance criteria
- You have impeccable attention to detail and great verbal and written communication skills

The following is desirable but not essential

- experience with JIRA for tracking bugs and issues
- experience using Browserstack or similar
- experience of using SQL
- you are IQSTB qualified

In return we will provide:

- A great working environment in Manchester's Northern Quarter
- A friendly, supportive and highly experienced team
- Ride-to-work, profit-share and referral bonus schemes
- 25 days holiday a year in addition to bank holidays
- Flexi-time

Please send CV and covering letter explaining why you're right for this job to jobs@corporationpop.co.uk. Please also state your salary expectations. We are keen to appoint to this position as soon as possible and will close applications as soon as we see a CV that excites us.
